

**Name:** BAEG Gyeong Hun. Ph.D.

**Title:** Associate Professor

**Education Background:**

Postdoctoral Fellow (Dept. of Genetics, Howard Hughes Medical Institute, Harvard Medical School, Boston, USA)  
PhD (Biomedical Sciences, Graduate School of Medicine, Osaka University, JAPAN)

**Employment History:**

- Assistant Professor: New York Medical College, NY, USA; 2006 - 2011
- Assistant Professor: National University of Singapore, Singapore; 2012 - 2019
- Visiting Associate Professor: International Research Center for Medical Sciences, Kumamoto University, Japan; 2019 - present
- Associate Professor: Ciechanover Institute of Precision and Regenerative Medicine, Life and Health Sciences, Chinese University of Hong Kong (SZ), Shenzhen, China; Jan. 2020 -Oct. 2021
- Associate Professor: Faculty of Medicine, Macau University of Science and Technology, Macau SAR; Nov. 2021 – present.

**Research Field:**

Stem Cell and Cancer Biology, Nanotoxicology using the fruit fly *Drosophila* as an *in vivo* model organism

**Email:** ghbaeg@must.edu.mo

**Tel:** 853 88971925

**Biography:**

I have earned my PhD degree in Biomedical Sciences from the Graduate School of Medicine, Osaka University, Japan where I carried out cancer research. To expand my knowledge about cancer biology, I have joined Prof. Norbert Perrimon's laboratory at Harvard Medical School, Howard Hughes Medical Institute as a postdoctoral fellow, and I characterized molecules such as Wnt and Jak-Stat implicated in tumorigenesis and development, using the fruit fly *Drosophila* as an *in vivo* model system. In 2006, I joined the Department of Paediatrics at New York Medical College, NY as an Assistant Professor, and focused on the role of Jak-Stat signaling in paediatric cancer, in particular acute lymphoblastic leukaemia. Since then, I have worked as an Assistant Professor in the Department of Anatomy, National University of Singapore, during 2012 and 2019, and worked as an Associate Professor in the School of Life and Health Science, Chinese University of Hong Kong (Shenzhen), during 2020 and 2021. My research used the *Drosophila* genetics to study the Jak-Stat signal transduction pathway and redox signaling in stem cell behavior and cancer regulation, and to study the molecular mechanisms underlying nanomaterial-mediated cyto- and genotoxicity. Genetic, genomic, molecular and cell biological techniques were combined to achieve a systems-level understanding of these complex processes. I have served as an *ad hoc* reviewer to Scientific Journals and Grant Bodies, including Biomaterials, Cell Death and Differentiation, and Small. I have also been appointed as an academic editor/editorial board

member of numerous International Refereed Journals and Book Series. I am interested in teaching Human Gross Anatomy to Medical, Pharmacy and Life Sciences Students.
